Bida 25-457 2026 Assignment WMD

- **Everleigh Bath Co.**

1. Website Specifications

This project is a **retail website** for a skincare business mainly centred towards children (kids under the age of 13). This paediatric website will be called Everleigh Bath Co.

Recent studies highlight that an e-commerce's business success depends on whether or not its able to successfully maintain existing customer and attract new customers. So, in order to achieve this, the website should be functional and have relevant information concerning the product and designed to appeal the target audience of the product (Amponsah & Antwi, 2021) . This site should be easy to navigate, youthful with many pastel colours and some charming illustrations to evoke innocence, making it clear that this business is focused on children. Moreso it should have soft, rounded fronts and shapes with aesthetic layouts. Since this is mainly focused on skincare, (which is commonly known to represent calmness, relaxation and self-care/self-love), there should be calming tones and smooth textures, with bright, but gentle colours and themes to represent cleanliness.

With all this in mind, the fact that **the target audience is parents of adolescents** should be noted, so I should keep the illustrations to a minimum, making it inviting with images of families and cartoons.

Examples of the products being sold and displayed on the website are moisturizers, haircare products, body washes and baby products (such as Nappy cream) put in different categories depending on who the products are meant for specifically (ie. Boys & girls, infants, and newborns. The products' information should be clear so they may decide whether the products are of quality and gentle enough for their kids. Making part of the production process and ingredients used clear to the website users (parents). Reassure the parents by making it clear that the business' products are verified by a medical society (International Foundation for Dermatology- IFD, approved by paediatricians and dermatologists for their peace of mind, and to gain their trust. All of this should make the business appealing to potential customers. These are the website objectives.

There should be a feature that gives suggestions to the users/returning customers/potential customers what products is recommended for their certain needs (e.g skin conditions such as eczema, cradle cap, dry skin, normal skin).

Information Design & Taxonomy

Colour scheme: pastel colours

INDEX.HTML

Once the link to this website is opened, the user is welcomed by the main page. The main page would consist of the navigation bar showing, the company logo, which also counts as the link to the home page. On the home page the customer is welcomed by a little section showing a discount promotion, making the users intrigued and interested in purchasing from the company. After that, as they scroll down the page, they see a carousel component, which is a slideshow cycling through multimedia (pictures and videos) relating to the company products. This multimedia are a way of promoting some of the products being used by the target audience, (parents and their children), making the website and its products more appealing.

Next are two different sections as they scroll down titles the “Shop by category” section (containing links to different pages dedicated to products meant for a specific user/age group), as well as the “Shop by concern” section (containing links to different pages dedicated to different products recommended for skin conditions).

The page is then concluded by the footer containing links to the About us, Connect with us, Terms and Conditions, FAQ pages.

SHOP.HTML

Also found in the navigation bar, is the link “**Shop**” which is a drop down to the links to different products’ categories pages (Body washes, Moisturizers, Hair care and Sun protection). This makes it easier for users to find the type of products they are looking for, making this website very easy to navigate.

BEST SELLERS.HTML

Next is the “**Best Sellers**” link on the navigation bar leading to the page displaying all the most trusted and popular products of the business.

ABOUT US.HTML

This link will direct users to the page dedicated to the brand’s storytelling, allowing customers to know a little more about the company and a snippet of the company’s production process. This builds trust between the buyer and seller, so they know what they expect from the company and make them less sceptical about what the products are made of.

PROFILE.HTML

Next, on the navigation bar, is the **“Profile”** icon leading to a page that allows for new users to make an account. This account would make the customer user experience as they’d get more personalized experience, seeing what products they’ve saved and make the payment and order racking process much easier. Making the e-commerce experience more personalized for the user improves their experience and increases the chances of them becoming loyal customers to the business as said by (Lucas, et al., 2023).

CART.HTML

Next to that icon is the **“Cart”** icon displaying all he products that the customer has saved and is intending on buying during that section, to be shown in the check out page. The check out page can only be accessed through a button on the “cart” page after the customer has selected the product they are intending on purchasing.

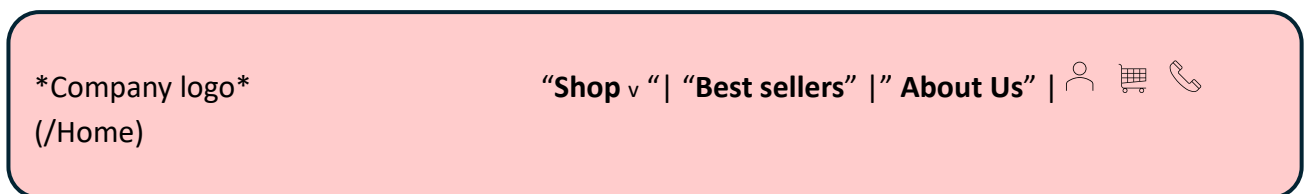

CONTACT US.HTML

Lastly is the **“Contact us”** icon leading users to a page displaying all the company’s social media platforms as well their e-mail and customer service line. Here customers will also be given the option to sent messages directly giving their opinions and queries.

Technical Brief

For this project, the Visual Studio Code app shall be used to write the HTML5 and CSS3 code. Bootstrap5 as well as Java script code on the same platform, VS Code was included, to make the website more useable, adaptable, appealing to the user's, responsive and useable on different types of devices and browsers.

The code was pushed onto Git hub, where the website was hosted.
